Uniform Dispenser and Return Center

Requesting a total contribution of \$206,573.15 for 3 dispensers

This automation would enable constant monitoring of quantities to avoid supply shortages that impacts on the operating schedule. Loss and waste of medical uniforms would be greatly reduced by traceability of users. Such an acquisition would alleviate frustrations, apprehensions and supply problems for designated users of medical uniforms (Operating Room, Birthing Unit, Minor surgery department, Pharmacy and medical device reprocessing).

Overall, each user eligible for a medical uniform would have a token in the system allowing them to obtain a set according to the established size. The token is collected when the soiled uniform is deposited in the section designated.

This system would improve the daily lives of several hundred employees and doctors.
