

Postoperative orthopedic chairs Surgical department

Requesting a total contribution of \$68,674.00

This request is to purchase 16 chairs for post-op orthopedic patients, mainly patients who underwent a hip surgery. The padded seating and the reclining options make the sitting position more tolerable for this type of clientele.

What are the benefits of having this item at the hospital:

1. Support for Proper Healing

- Ergonomic Design: Post-surgical chairs often provide proper lumbar and body support, reducing strain on sensitive areas affected by surgery.
- Reclining Positions: Many allow for adjustable reclining angles, critical for surgeries involving the back, hips, or abdomen to avoid stress on incisions and promote circulation.

2. Pain Reduction

- Pressure Relief: Cushioned and contoured seats minimize pressure on sore or operated areas, reducing pain.
- Assistive Features: Some have motorized lift functions to help users sit or stand with less effort, decreasing discomfort.

3. Improved Circulation

- Leg Elevation: Chairs that allow the feet to be raised help reduce swelling and improve blood flow, particularly important after surgeries like knee replacement or vein procedures.
- Position Changes: They enable frequent position adjustments, which are critical for preventing issues like blood clots or stiffness.

4. Safety and Mobility

- Sturdy Construction: Prevents accidents, ensuring stability when getting in or out of the chair.
- Wide Armrests and Non-Slip Surfaces: Offer additional support to avoid falls or strain.

5. Convenience for Caregivers

- Easier Transfers: Features like adjustable height or lift assistance make it easier for caregivers to help patients without risk of injury.

6. Customizable Options

- Many chairs are tailored to specific needs, such as bariatric designs for heavier individuals or zero-gravity options for those with specific circulation or back pain concerns.

Investing in a proper post-surgical chair can make a significant difference in recovery quality, comfort, and overall health outcomes.
