

ENDOSCOPY SCOPES

Requesting a total contribution of \$115,030.00 for 3 scopes

Therapeutic Pediatric Colonoscope / Therapeutic Gastroscope / Pediatric Gastroscope

The addition of these scopes will represent a significant advancement in the care and management of our patients, particularly those affected by complex gastrointestinal conditions. They will be instrumental in enhancing our diagnostic and therapeutic capabilities for individuals with cancers of the upper and lower digestive tracts, such as esophageal, gastric, and colorectal cancers. Furthermore, they will greatly improve our ability to assess and treat challenging cases of diverticular disease, as well as various esophageal disorders including strictures, Barrett's esophagus, and motility issues. By equipping the team with more precise and versatile tools, these scopes will directly contribute to more accurate diagnoses, earlier interventions, and ultimately, better outcomes for our patients.
